

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

1. (currently amended): A method of manufacturing a radio-conductive film of an inorganic/organic composite radio-conductive material comprising the step of pressing the inorganic/organic composite radio-conductive material, wherein the radio-conductive material is pressed in a state where the radio-conductive material is formed on a substrate, and the radio-conductive material is pressed at a pressure not higher than 50kg/cm<sup>2</sup>.

2. (original): A method as defined in Claim 1 in which the inorganic/organic composite radio-conductive material is pressed at an elevated temperature.

3. (original): A method as defined in Claim 2 in which the elevated temperature is in the range of 50°C to 200°C.

4. (canceled).

5. (original): A method as defined in Claim 1 in which the inorganic/organic composite radio-conductive material is BiI<sub>3</sub>/nylon.

6. (currently amended): ~~A method of manufacturing a radio-conductive film of an inorganic/organic composite radio-conductive material comprising~~ as defined in Claim 1, wherein said process further comprises the step of heating a film of inorganic/organic composite radio-conductive material, and wherein a film of inorganic/organic composite radio-conductive material is pressed during pressing.

7. (original): A method as defined in Claim 6 in which the elevated temperature is in the range of 50°C to 200°C.

8. (original): A method as defined in Claim 6 in which the inorganic/organic composite radio-conductive material is BiI<sub>3</sub>/nylon.
